

ICT600 CORRECTED STUDENT EDITION

Semester 20254 Test 1 Corrected Student Scheme

Corrected, self-contained Test 1 answer reference

Scope	December 2025 Test 1
Evidence	Printed question, supplied scheme where available, current lecture notes, and technical verification
Status	Official question and answer audited; invalid CSS, mismatched trace, and redirect syntax corrected

Prepared 26 September 2026

How to use this reference

Teaching-use document

Attempt the original question before revealing this scheme. This corrected edition is not an official UiTM replacement; it records known source errors and accepts equivalent technically correct answers.

- Assessment total: 80 marks.
- Model answers show one defensible solution; alternative correct wording or code may receive full credit.
- For code, method marks remain available when the approach is sound and a minor syntax error does not invalidate the solution.
- Security improvements are shown where historical examples trusted or displayed unvalidated input.

Question 1(a)

Define Internet, Web Standards, and Web Server.

[6 marks]

Model answer

- Internet: global network of interconnected networks using TCP/IP.
- Web standards: shared specifications that support interoperable, accessible web content.
- Web server: software/system that receives HTTP requests and returns web resources.

Marking guide: 2 marks each.

Question 1(b)

Identify FOUR web-based CMS tools.

[4 marks]

Model answer

- Any four accepted examples: WordPress, Joomla, Drupal, Blogger, Wix, or another valid CMS/site-building platform.

Marking guide: 1 mark each.

Question 2(a)

Describe FIVE website-anatomy components.

[5 marks]

Model answer

- Any five of containing block, logo, navigation, content, footer, and whitespace, each with a correct purpose.

Marking guide: 1 mark each, maximum 5.

Correction / moderation note

The supplied scheme presents six concepts although the question requests five.

Question 2(b)

Create the powderblue, centred page with blue h1 and red paragraph.

[2 marks]

Model answer

- Use valid CSS comments or omit comments.

```
<!doctype html><html><head><style>
body { background: powderblue; text-align: center; }
h1 { color: blue; }
p { color: red; }
</style></head><body>
<h1>This is a Heading</h1><p>This is a paragraph.</p>
```

```
</body></html>
```

Marking guide: Required body styling (1), h1/p colours and content (1).

Correction / moderation note

The supplied scheme uses // inside CSS, which is invalid.

Question 2(c)

Reproduce the printed student/father/age table.

[3 marks]

Model answer

- Use one header row and the three complete data rows.

```
<table border="1">
<tr><th>Nama Pelajar</th><th>Nama Bapa</th><th>Umur</th></tr>
<tr><td>Ridhwan</td><td>Razak</td><td>54</td></tr>
<tr><td>Khalil</td><td>Anwar</td><td>49</td></tr>
<tr><td>Syazwan</td><td>Razali</td><td>66</td></tr>
</table>
```

Marking guide: Table/header (1), data-cell structure (1), complete values (1).

Question 2(d)

Construct the electronic-news registration form posting to register.php.

[20 marks]

Model answer

- Include full name, email, password, birthdate, gender, and submit controls.

```
<form action="register.php" method="post">
<label>Full Name <input name="fullname" required></label><br>
<label>Email <input type="email" name="email" required></label><br>
<label>Password <input type="password" name="password" required></label><br>
<label>Birthdate <input type="date" name="birthdate"></label><br>
<label><input type="radio" name="gender" value="Male"> Male</label>
<label><input type="radio" name="gender" value="Female"> Female</label><br>
<button type="submit">Signup</button>
</form>
```

Marking guide: Form action/method (4), five field groups (10), submit (2), labels/valid structure (4).

Question 3(a)

Assign the Figure 2 values to JavaScript variables and output them.

[10 marks]

Model answer

- Follow the printed values: Shamal bin Aidi, Al-Khwarizmi, 8, and 3.55.

```
<p id="output"></p>
<script>
const studentName = "Shamal bin Aidi";
const programCode = "Al-Khwarizmi";
const part = 8;
const cgpa = 3.55;
document.getElementById("output").textContent =
`Name: ${studentName} | Class: ${programCode} | Year: ${part} | CGPA: ${cgpa}`;
</script>
```

Marking guide: Variables (4), output (4), valid script/general syntax (2).

Question 3(b)

Create a function that outputs Name: and call it with Shamal.

[5 marks]

Model answer

- Use one parameter and a correct call.

```
function displayUserName(userName) {  
    document.getElementById("name").textContent = "Name: " + userName;  
}  
displayUserName("Shamal");
```

Marking guide: Declaration/parameter (1), correct output (2), correct call (2).

Question 4(a)

Produce the LN22/London and OX67/Oxford table from a PHP multidimensional array without loops.

[5 marks]

Model answer

- Store two nested rows and output both by index.

```
<?php  
$cities = [['LN22', 'London'], ['OX67', 'Oxford']];  
echo '<table border="1">';  
echo '<tr><td>'. $cities[0][0]. '</td><td>'. $cities[0][1]. '</td></tr>';  
echo '<tr><td>'. $cities[1][0]. '</td><td>'. $cities[1][1]. '</td></tr>';  
echo '</table>';  
?>
```

Marking guide: Array (2), table (0.5), first row (1.25), second row (1.25).

Question 4(b)

Trace the PHP script exactly as printed in the question.

[10 marks]

Model answer

- She sells sea shells by the sea shore now
- SHE SELLS SEA SHELLS BY THE SEA SHORE NOW
- she sells sea shells by the sea shore now
- She sells sea shells by the sea shore now
- e sell
- bool(false)

Marking guide: Award across original, case conversions, unchanged replacement, substring, and exact strpos type.

Correction / moderation note

The supplied scheme silently changes the printed search/replacement operations to sea/round and by. The corrected trace follows the question's can/round and can operations.

Question 4(c)

Check the session role and redirect administrators to admin_view.php, otherwise error.php.

[10 marks]

Model answer

- Start the session, test the exact admin role, send a valid Location header, and stop execution.

```
<?php  
session_start();  
if (isset($_SESSION['role']) && $_SESSION['role'] === 'admin') {  
    header('Location: admin_view.php');  
    exit;  
}  
header('Location: error.php');
```

```
exit;  
?>
```

Marking guide: Session (2), condition (3), admin redirect/exit (2), error redirect/exit (2), syntax (1).

Correction / moderation note

The supplied smart quotes in header() would cause a PHP parse error.

Consistency rules

- Award equivalent technically correct syntax and wording.
- Do not reproduce a known historical error merely because it appears in a supplied scheme.
- Keep printed subpart totals fixed unless a documented moderation decision says otherwise.
- For scenario questions, connect the explanation or mitigation to the scenario.
- Record additional accepted alternatives for the next controlled revision.
