

ICT600 CORRECTED STUDENT EDITION

Semester 20262 Test 1 Corrected Student Scheme

Corrected, self-contained Test 1 answer reference

Scope	May 2026 Test 1
Evidence	Printed question, supplied scheme where available, current lecture notes, and technical verification
Status	Official question and answer audited; CSS comments and modern script-loading guidance corrected

Prepared 26 September 2026

How to use this reference

Teaching-use document

Attempt the original question before revealing this scheme. This corrected edition is not an official UiTM replacement; it records known source errors and accepts equivalent technically correct answers.

- Assessment total: 80 marks.
- Model answers show one defensible solution; alternative correct wording or code may receive full credit.
- For code, method marks remain available when the approach is sound and a minor syntax error does not invalidate the solution.
- Security improvements are shown where historical examples trusted or displayed unvalidated input.

Question 1(a)

Define Web Browser, Web Server, and HTTP.

[6 marks]

Model answer

- Web browser: client software that retrieves and renders web resources.
- Web server: software/system that receives requests and returns web responses.
- HTTP: Hypertext Transfer Protocol, the request-response protocol used between web clients and servers.

Marking guide: 2 marks each.

Question 1(b)

Identify four terms from the descriptions.

[4 marks]

Model answer

- Content Management System (CMS); Responsive Web Design (RWD); Cascading Style Sheets (CSS); Internet.

Marking guide: 1 mark each.

Question 2(a)

Explain Internal CSS and External CSS.

[4 marks]

Model answer

- Internal CSS: rules in a style element, normally in head, applying to that page.
- External CSS: rules in a separate .css file connected with a link element, reusable across pages.

Marking guide: 2 marks each: location/method (1) + suitable use (1).

Question 2(b)

Create the .alert-box CSS.

[5 marks]

Model answer

- Use valid CSS declarations and the normalised class name .alert-box.

```
.alert-box {  
  background-color: red;  
  color: white;  
  border: 2px solid black;  
  text-align: center;  
}
```

Marking guide: Background (1), text colour (1), complete border (2), alignment (1).

Correction / moderation note

The supplied scheme uses // comments, which are invalid in CSS; the printed class is visually split but should be .alert-box.

Question 2(c)

Make banner.jpg a link to UiTM with suitable alternative text.

[3 marks]

Model answer

- Nest the image inside the anchor.

```
<a href="https://www.uitm.edu.my/">
  
</a>
```

Marking guide: Correct href (1), src (1), alt (1).

Question 2(d)

Create the Event Registration Form posting to register.php.

[18 marks]

Model answer

- Include required name, email, one participant role, faculty menu, and submit action.

```
<form action="register.php" method="post">
<label>Full Name <input name="fullname" required></label><br>
<label>Email Address <input type="email" name="email"></label><br>
<label><input type="radio" name="role" value="Student"> Student</label>
<label><input type="radio" name="role" value="Lecturer"> Lecturer</label><br>
<label>Faculty <select name="faculty">
<option value="FSKM">FSKM</option><option value="FPP">FPP</option>
</select></label><br><button type="submit">Submit</button>
</form>
```

Marking guide: Form/action/method (4), full name (4), email (3), role (3), faculty (2), submit (2).

Question 3(a)

List THREE insertion methods and explain why scripts are often deferred or placed after content.

[5 marks]

Model answer

- Inline, internal/embedded, and external JavaScript (3).
- A classic script at the bottom avoids blocking earlier HTML parsing and runs after the relevant DOM elements exist (2).
- A modern external script with defer in head is also a recommended equivalent because it downloads without blocking and executes after parsing.

Marking guide: Three methods (3), valid reason and explanation (2).

Correction / moderation note

Absolute-bottom placement is not the only modern recommendation; defer is an accepted and often cleaner approach.

Question 3(b)

Create calculateTotal(price, quantity) and display the result in #receipt using innerHTML.

[10 marks]

Model answer

- Multiply the two parameters and update the required element.

```
function calculateTotal(price, quantity) {
  const total = price * quantity;
  document.getElementById("receipt").innerHTML =
    "Your total is: RM " + total.toFixed(2);
}
```

Marking guide: Function/parameters (3), calculation (2), lookup and required innerHTML output (5).

Correction / moderation note

innerHTML is required by this historical item. For ordinary plain text, textContent is generally safer.

Question 4(a)

List PHP's FOUR scalar data types.

[4 marks]

Model answer

- boolean, integer, float (double), string.

Marking guide: 1 mark each.

Question 4(b)

State the purpose of a PHP control structure.

[1 mark]

Model answer

- It controls the order or path of execution using decisions and repetition.

Marking guide: 1 mark for the correct purpose.

Question 4(c)

Assign score 75 and display the grade using the printed scale.

[10 marks]

Model answer

- 75 must produce Grade B.

```
<?php
$score = 75;
if ($score >= 80) echo 'Grade A';
elseif ($score >= 70) echo 'Grade B';
elseif ($score >= 60) echo 'Grade C';
else echo 'Grade F';
?>
```

Marking guide: Variable (1), A condition (2), B condition (3), C condition (3), final else (1).

Question 4(d)

Generate the multiplication table for 5 from 1 to 10.

[10 marks]

Model answer

- Use a for or while loop and print every equation on a new line.

```
<?php
$num = 5;
for ($i = 1; $i <= 10; $i++) {
    echo "$num x $i = " . ($num * $i) . '<br>';
}
?>
```

Marking guide: Base value (1), loop (4), multiplication (2), formatted complete output (3).

Consistency rules

- Award equivalent technically correct syntax and wording.
- Do not reproduce a known historical error merely because it appears in a supplied scheme.
- Keep printed subpart totals fixed unless a documented moderation decision says otherwise.
- For scenario questions, connect the explanation or mitigation to the scenario.
- Record additional accepted alternatives for the next controlled revision.
