TIME	:	2 HOURS

INSTRUCTIONS TO CANDIDATES

Answer **ALL** questions.

Student Name : _____

Student ID : _____

Group : _____

DO NOT TURN THIS PAGE UNTIL YOU ARE TOLD TO DO SO

This examination paper consists of 5 printed pages

QUESTION 1

a) Define the following web technology terms:

- I. Web Browser
- II. Web Server
- III. HTTP

(6 marks)

b) Identify the suitable term for the following descriptions:

- I. A software application that allows users to build and manage a website without having to code it from scratch.
- II. An approach to web design that ensures web pages render well on a variety of devices and window or screen sizes.
- III. A styling language used for describing the presentation of a document written in HTML.
- IV. A global system of interconnected computer networks that use the standard protocol suite to serve billions of users worldwide.

(4 marks)

QUESTION 2

a) There are three ways to insert CSS into an HTML document: Inline, Internal, and External. Briefly explain **Internal CSS** and **External CSS**.

(4 marks)

b) Write the CSS code to create a warning alert box targeting a class named **.alert-box**. The styling must fulfill the following visual requirements:

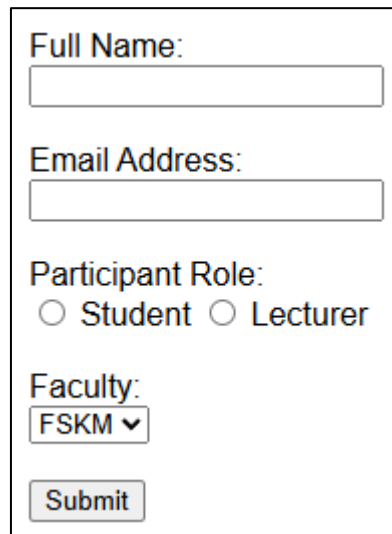

- I. A red background with white text.
- II. A 2-pixel solid black border.
- III. The text content must be horizontally centered.

(5 marks)

c) Write the HTML code to display an image named banner.jpg (with the alternative text "Promo Banner"). This image must act as a clickable hyperlink that directs the user to the URL <https://www.uitm.edu.my>.

(3 marks)

- d) Create an Event Registration Form in an HTML5 page. The form must be created according to Figure 1 and form reference below. The form must be sent to "register.php" using the POST method when the user clicks the Submit button.

The figure shows a registration form with the following elements:

- Full Name:** A text input field.
- Email Address:** A text input field.
- Participant Role:** Two radio buttons labeled "Student" and "Lecturer".
- Faculty:** A dropdown menu with "FSKM" selected.
- Submit:** A button.

Figure 1

(18 marks)

Form reference:

- I. A mandatory text field for "Full Name".
- II. An input specifically formatted for "Email Address".
- III. A single-choice selection for "Participant Role" (Student or Lecturer).
- IV. A selection menu for "Faculty" containing two options (FSKM or FPP).
- V. A button to submit the form.

QUESTION 3

a) JavaScript is a client-side scripting language that brings dynamic functionality and interactivity to web pages without needing to be compiled.

I. List **THREE (3)** ways to insert JavaScript into an HTML document.

(3 marks)

II. In modern web development, it is highly recommended to place `<script>` tags at the absolute bottom of the HTML `<body>` rather than inside the `<head>` section. State and briefly explain **ONE (1)** reason why this is considered best practice.

(2 marks)

b) Write a JavaScript function named `calculateTotal` that takes two parameters: price and quantity. The function should calculate the total cost (price multiplied by quantity). Display the string "Your total is: RM [calculated amount]" inside an HTML `<div>` element that has the ID "receipt". Use the `innerHTML` property.

(10 marks)

QUESTION 4

PHP (recursive acronym for PHP: Hypertext Pre-processor) is a widely used, open source, and general-purpose scripting language that is particularly suitable for web development and can be embedded into HTML.

a) PHP has eight primitive types. List out the FOUR (4) scalar data types in PHP.

(4 marks)

b) What is the purpose of a control structure in PHP?

(1 mark)

c) A university uses the following grading scale to evaluate student exam scores:

- I. 80 and above: Grade A
- II. 70 to 79: Grade B
- III. 60 to 69: Grade C
- IV. Below 60: Grade F

Write a complete PHP script that assigns a test score of 75 to a variable and uses an appropriate control structure to evaluate and display the corresponding grade based on the scale above.

(10 marks)

d) Write a complete PHP script using a loop (for or while) that generates and displays the multiplication table for the number 5, from multiplier 1 up to 10. Each equation must be displayed on a new line (e.g., 5 x 1 = 5).

(10 marks)
